

Whisper Bridge

Talk anywhere. Type everywhere.

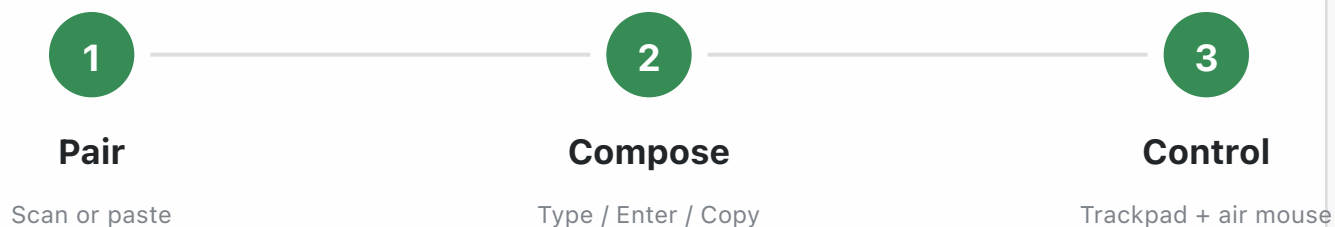

Android macOS Ubuntu Windows

IPHONE / IPAD WALKTHROUGH

Your phone. Your keyboard.

A native iOS setup for Whisper Bridge: pair a computer, send text, steer its cursor, and use the iPhone as an air mouse.

THE SIMPLE VERSION

iOS 26+ | Liquid Glass | Tailscale-ready | iPhone + iPad

iOS is currently a signed preview build. The desktop receiver protocol is shared with Android.

[whisperbridge.app](#) | [Open source setup guide](#)

Install the three pieces.

The iOS app is the controller. Your computer runs the receiver; Tailscale makes the path private.

1

Whisper Bridge iOS

Install the signed preview on iPhone or iPad.

2

Tailscale

Sign in to the same tailnet on phone and computer.

3

Desktop receiver

Install the Mac, Ubuntu, or Windows ZIP from GitHub Releases.

[OPEN RELEASES](#)

Before moving on

- iPhone/iPad is on iOS 26 or later.
- Tailscale shows Connected on both devices.
- The receiver console opens at localhost:9877.

Tailscale is optional on trusted home Wi-Fi, but recommended for remote use.

Pair your computer.

Scan the receiver QR, or paste its pairing link. The link includes the private host, port, and token.

1

Install receiver

Open the computer's local console.

2

Open Settings

Tap the gear in Whisper Bridge.

3

Scan or paste

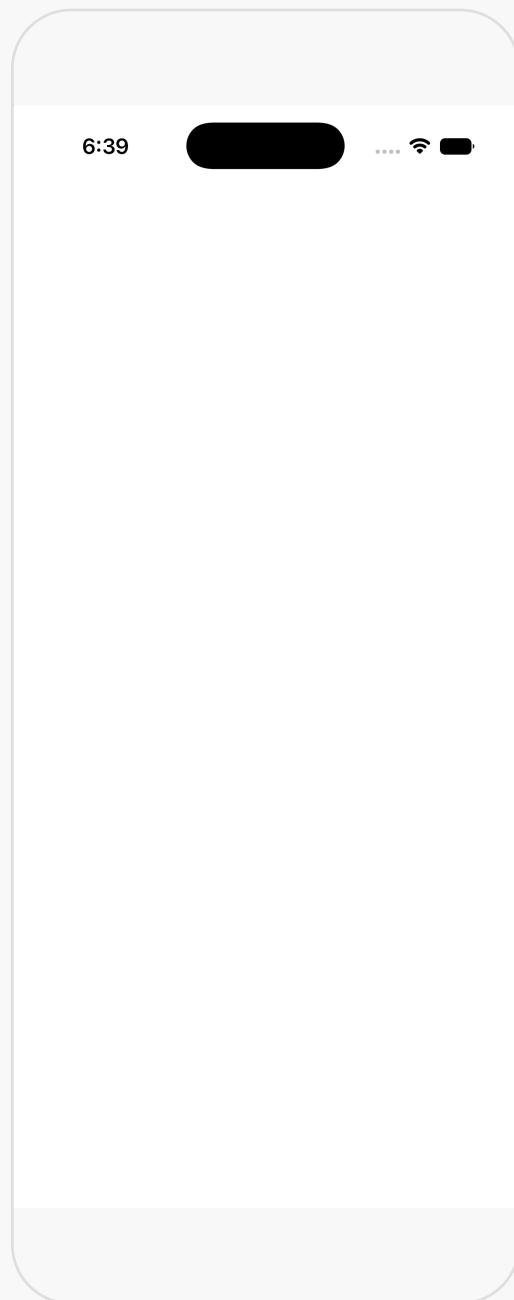

Use Scan for the QR, or Paste pairing link.

4

Test and save

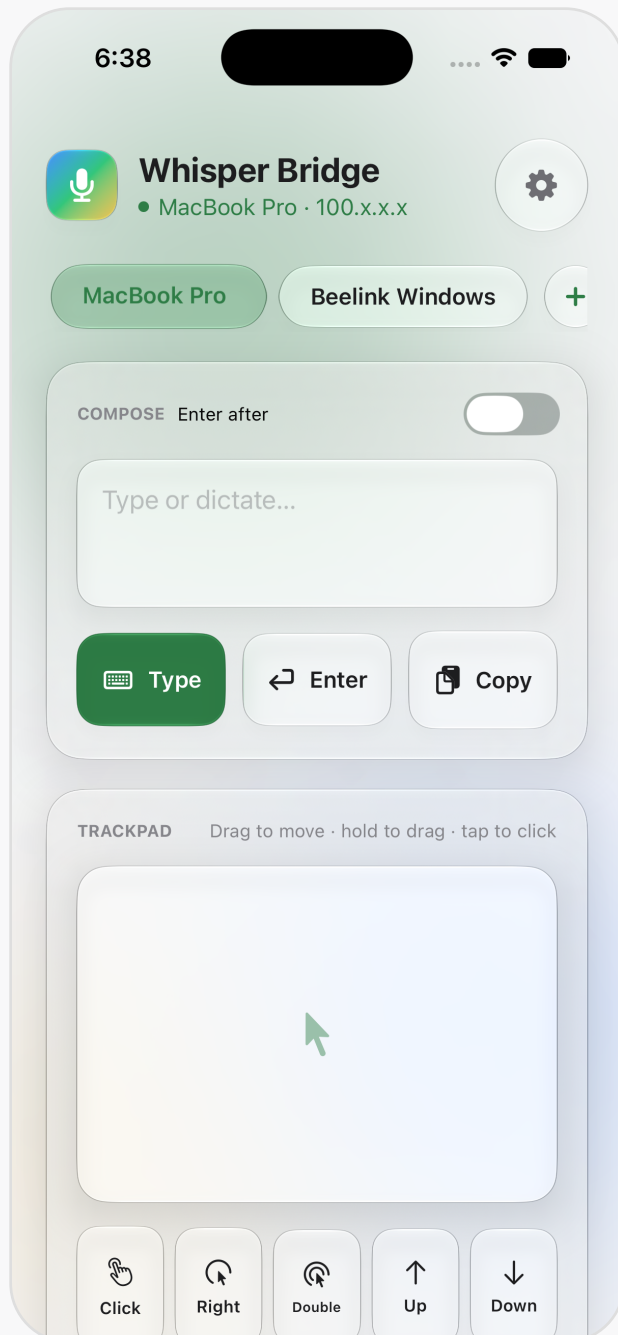

Confirm Connected, then tap Save.

No camera scan? Paste the pairing link from the receiver console.

Compose and send.

The compose screen keeps the fast path close: choose a profile, enter text, and send it to the focused field.

1

Choose

Tap MacBook Pro, Mac Studio, or another profile.

2

Write

Type or paste in the compose field.

3

Type

Tap Type to paste into the focused computer field.

4

Return

Tap Enter, or enable Enter after typing.

5

Copy

Tap Copy to update the computer clipboard only.

Trackpad + air mouse.

Use the phone as a remote pointer when your hands are away from the computer.

Trackpad

Drag to move. Tap to click. Hold to drag. Two fingers scroll.

Air mouse

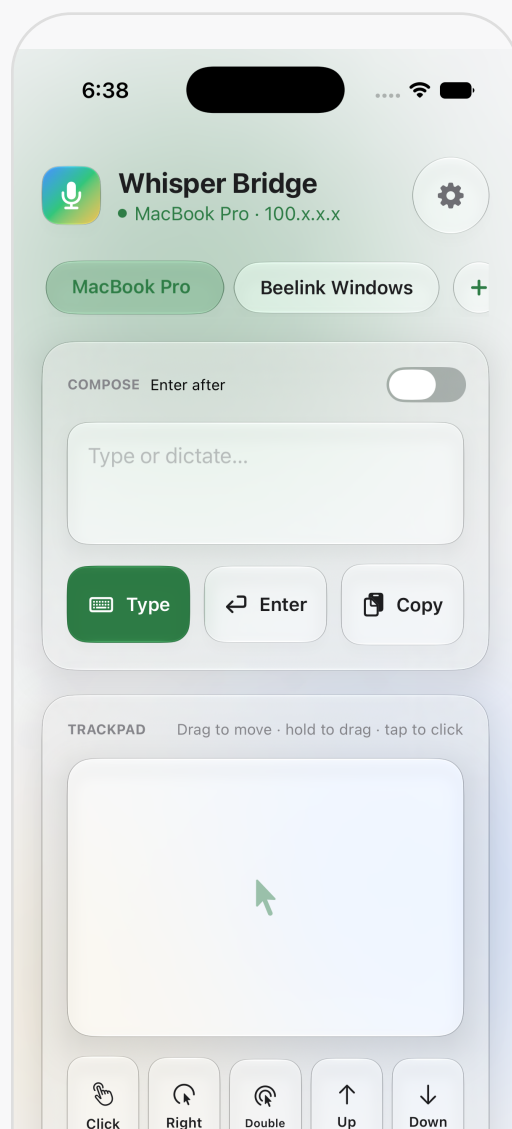

Press and hold the Air mouse button, then tilt the phone to steer.

Sensitivity

Tune the speed in Settings; invert direction if the motion feels backward.

Safety

Release the button to stop gyro control immediately.

If the cursor does not move, click a target field first and confirm the receiver has mouse permissions.
